

Equipment list of equipment for the acquisition of other people's items and data:

Bobby pin:	A common bobby pin ... in conjuncture with a lot of skill (or a lot of luck) it can be used to open less complicated locks. User must perform a test on Luck to check if it breaks!	3 \$ s.a. 10: 0,1 Pfund
small set of lockpicks:	A small set of strangely formed metal tools. It's provenance is unknown but certainly unethical.	150 \$ 2 Pounds
Big set of lockpicks:	A bigger and more lovingly made set of thieving tools.	300 \$ 4 Pounds
Electronic Lockpick Mk. I	A rare sight, the Watts Electronics © Electronic Lockpick Mark I. Perfect for electronic locks.	600 \$ 1,5 pounds
Electronic Lockpick Mk. II	A really rare sight in the wasteland. The Watts Electronics © electronic lockpick that hit the markets a short nine days before the 23 rd October of 2077 – the day on which the bombs fell.	900 \$ 4 pounds
Glass cutter	A small circle with a diamond on one end and a suction cup on the other. Ideal to open a pane of glass undetected.	100 \$ 0,3 pound
„Sniffles“-computer virus	A small, simple virus on a THT-Holodisk. Barely able to bypass or tunnel the most primitive security systems. On the other hand, it is very user friendly.	250 \$ 0,2 pound
„Influenza“-computer virus	A slightly outdated virus, that can only bypass slightly outdated security systems. But you know the old saying: On old computers one learns to hack ... or something like that. Available on THT-Holodisk at selected specialist dealers.	500 \$ 0,2 pound
„Ebola“-computer virus	Situated on a THT-Holodisk, this handy program helps you hack. Not very user friendly and demanding a user that really knows computers.	2000 \$ 0,2 pound
