

Ranged weapons - Rifles

Submachine guns:

(These weapons are used two handed, unless stated otherwise!)

(Tuning can change the range division. All range divisions given in this list apply to iron sight/standard models!)

(Please look up the effects of tunings in the tuning list)

(If an encounterable versions requires a prior, other tuning to work, that version will have that tuning as well. For example, an infrared scope means that the mounting rails and the infrared light are both there as well)

(Prices are not guaranteed!)
